

# Introduction to Risk Assessment

IIRSM & CPD Approved - 3 CPD points

Risk assessment is a systematic approach to looking at work activities and identifying hazards and risks that could cause harm to people, property or the environment.

The main purpose of risk assessments is to help prevent accidents and ensure the safety of employees and anyone affected by workplace activities. The course defines important terms, provides basic background information explaining the importance of risk assessments and discusses the legislations that apply.

It provides practical advice to identify hazards and analyse risk, and the responsibilities of both employers and employees. The candidates will have a firm understanding and know how to complete a risk assessment.
